

Thinglove™
technology has arrived

INTRODUCING MAXFIT™

All industries are looking for innovative solutions that improve the well being of employees, promote compliance and add value.

O'Neill Innovations, the leader in comfort technology, is proud to introduce the most comfortable glove available on the market today, **MAXFIT™** with Thinglove™ technology.

comfort

The innovative materials, design, contouring fit and lightweight construction of the **MAXFIT™ glove** draws away perspiration and allow your hands to “breathe”, even during the summer.

grip

Our production process and advanced material technology allow the **MAXFIT™ glove** to grip a wide variety of surfaces. Our performance coating is extremely effective for smooth surfaces such as corrugated cartons, glass, furniture, drums, machined parts, etc. It also reduces the potential for skin abrasion and injury that can result in lost time from work accidents.

touch

Most industrial gloves are bulky, feel uncomfortable and lack dexterity. But, the **MAXFIT™ glove** with Thinglove™ technology allows precise movement and control in performing even the most delicate tasks, such as assembly or tool handling...true “surgical-like dexterity” without the discomfort.

Hand Healthy
